

Encrypting Secure Email – Internal Users

Composing a Secure Message to External Users

When you want to send a secure message, all you need to do is use your regular email application and enter the word *devsecure* anywhere into the **Subject** field of your message.

Using the Proofpoint Encryption Plug-in for Microsoft Outlook

An Outlook plug-in will be available in the *Applications to Install* menu. After installation, a **Send Securely** button appears in Outlook when you compose a message. To send a secure message, all you have to do is click **Send Securely**.
