Login Procedure

At the Novell login screen, enter the username and temporary password you were given for the network. Click “OK.”

Changing Password

After your first login, you will be prompted to change your password. It’s IMPORTANT to NEVER share this password with anyone. Not even the IT department knows your password once you set it, although we can always reset it for you.

Upon first login, you will see the “PASSWORD EXPIRED” screen. Select YES.
Enter your new password in both the ‘New’ and ‘Confirm’ field and click ‘OK’

Click ‘OK’ again when you see the ‘Successfully changed password’ window.
When the Devereux Network Acceptance Statement comes up and after you have read it, please click “OK.”

Next you will see the “Zenworks for Desktops” box come up, and the first time you log in, it will probably take a few minutes to finish loading. Updates are being verified in the background. Once completed, your Network Application Launcher, (NAL) window will appear. This will show icons for all programs assigned to your ID.
